

The impact you'll be making with your fundraising

Thanks to the generosity of supporters like you, we've funded life-saving research which has helped double cancer survival rates in the UK over the last 40 years. Every pound you raise will bring us a step closer to beating cancer, keeping more families together in the future.

Here's an idea of how the funds you raise can help in the fight against cancer:

£60

Could fund a lab technician for 1 day. Lab technicians are crucial to the running of the lab, ensuring researchers are equipped with everything they need to beat cancer.

£1000

Research assistants carry out vital experiments in the lab, helping us to find the next breakthrough in cancer research. £1000 could fund a research assistant for 2 weeks (£520 for 1 week).

£100

Could pay for a patient's cancer biopsy, where a tiny amount of tumour is removed with a needle to be studied in the lab.

£1500

Buys a 3D printer, which our scientists can use to invent new and bespoke pieces of equipment that don't exist in the lab. This helps our scientists carry out ground-breaking experiments to help us beat cancer.

£350

Buys special chemicals called antibodies, which light up tiny parts of cancer cells, helping shed light on new ways to beat cancer.

£2500

Helps Professor Willie Hamilton and researchers looking at the accuracy, cost, effectiveness and suitability of a range of diagnostic tests used in GPs surgeries. Hopefully this will not only shorten the waiting time for diagnosis, but also reduce patients' anxiety.
